Things to Do on the North Shore...

CHICAGO BOTANIC GARDEN

1000 Lake Cook Road Glencoe, IL 60022 Main: (847) 835-5440 Member: (847) 835-8215

Admission is free.
Parking rates apply.
Open most nights till 9pm.

The Chicago Botanic Garden is a great place for families in the summer. Our family fun pack includes parking AND tickets to the Butterflies & Blooms exhibition and the Model Railroad Garden! Try a family drop-in activity at the Kleinman Family Cove or the Grunsfeld Children's Growing Garden.

Summer also means longer hours and spectacular Evenings at the Garden. Music fills the air four nights each week, as visitors picnic, dance, and feel summer come to life.

This week, join the free tour of the Rose Garden, led by a Garden horticulturist, and plan to see the Show of Summer, with exhibition and classes presented by six Chicago-area Garden Clubs.

RIVERS CASINO

3000 S. River Road | Des Plaines, IL 60018 888.307.0777 | 847.795. Open daily from 9am – 7am

Rivers Casino is the newest casino in Chicagoland, with over 1,000 of the newest and hottest slots and nearly 50 exciting table games. Located in Des Plaines, Illinois, Rivers Casino is just minutes from downtown Chicago and O'Hare International Airport.

ARLINGTON PARK RACE TRACK

Restricted Choice Revisited by David King

One is often enjoined to enjoy oneself, But what has it really meant? It tends to come easy, straight off the shelf. The full meaning rarely is sent. [Nicholas Thomas 1996]

So it is with bridge "tips". One hears them abbreviated, sometimes so much so that their full meaning is obscured. For example: "Cover an honor with an honor"; "Aces are meant to go on Kings"; "Second hand low, third hand high" etc. Things are seldom as simple as they may seem. So it is with Principle of Restricted Choice.

Consider a hand with W/E suit divided: A 10 x x K 9 x x x.

You require losing no tricks. You play the Ace, say, and South drops the Jack, or the Queen. One is taught that best subsequent play is to finesse the 9. The "tip" says: "if South held Q J bare, either card may have been played. The fact that one was played suggests that the other was not held.". Hence the term "Restricted": one should assume South's choice were restricted.

A more universal way of expressing this advice is to consider what holding South may have so that the play of whatever card was played was not only naturally obligatory, but furthermore will enable you to make your required number of tricks.

In this case above, the answer is clearly a singleton. With a doubleton the play would not be obligatory. Similarly, with A x opposite K Q 9 x x x, you play the Ace and South drops the 10 or Jack. A subsequent finesse against the other is usually your best chance if you need 6 running tricks.

This slightly different way of expressing the advice applies also when the significant two missing cards are not touching. Consider A x opposite K J 9 8 x, where you need 5 tricks. You play the A and South drops the 10. Applying this revised version of the Principle: "what holding could South have so that the play was naturally obligatory and will enable you to run 5 tricks?". The answer is Q 10 doubleton. So your best chance now is to play the King, dropping the missing honor and running 5 tricks.

In a defender's position, can false-carding help? If one does the arithmetic, you should find it will not in the long run, yet that is no reason for not trying. With touching honours the expert advice is to pick one at random, so that you do not gain a reputation for false-carding. It is more subtle for the particular missing Q and 10 situation above. If you hold them doubleton, there is little you can do. It becomes more interesting, however, when you do not hold the doubleton Q 10!

Consider South holding 10 x x. The normal play is for West to play the Ace, finesse the Jack and run the suit, felling the Queen on the next round. Suppose, however, that South drops the 10 under the Ace! If declarer really needs 5 running tricks then the Principle of Restricted Choice (restated) suggests that the King should follow. Now the attempt to drop the assumed now bare Queen will fail.

Nevertheless, there is a "tip" for declarer in such situations: "if in doubt, let the opponents fool you, don't fool yourself". But that is yet another story!

[I am indebted to David Thomas for drawing attention to this somewhat rare situation.]

As noted above, the significant cards do not have to be adjacent. Nor do they have to be honors. Consider this defensive problem:

(Continued from page 7)

S 10 x x H 10 x D A J x x x x C K Q

Sxx Sx HAQxxxxx HJx Dxx DKx

C92 CAJ1087653

SAKQJxxx HKx DQ10x C4

South plays in 4 Spades after East has pre-empted in Clubs. The lead is 9C, won by East. What to return?

If the 9 is a singleton, a Club ruff is good. If a doubleton, a Heart switch is better. The significant cards are the 2 & 4 of Clubs. Using the Principle of Restricted Choice one is advised to assume that the play of the 4C was obligatory, hence a singleton.

4th of July Jokes

Q: Where was the Declaration of Independence signed?

A: On the bottom.

Q: What did the flag say to the pole?

A: Nothing, it just waved.

Q: What did polly the parrot want for the 4th of July?

A: A fire cracker

Welcome from Angie ...

Angie Clark, tournament chairman, wants to welcome all of you to our great new playing venue, The Northbrook Hilton. The Hilton has served us well in past years for such competitions as Grand National Teams. It has long been a player favorite, located in the heart of Unit 123's largest preponderance of bridge players.

The lighting in the playing area is excellent. The hotel personnel are accommodating. The parking is adequate. The hotel restaurant is a fixture in the area with great food and reasonable prices.

If there is anything we can do to make your stay better, please advise us. We are here to serve.

Carl Sharp is running the Partnership Desk. He is the best in the midwest (maybe anywhere) at it.

Mike Cochran is running the I/N program.

Suzi Subeck is doing the Daily Bulletins.

We want to be successful at the new site and we are counting on your support.

Hope everyone has fun at today's Pro-Am... our signature SummerFest event.

The area has lots of great eateries and every day we will include some recommendations in the *Firecracker*.

Please put a slip in the Bulletin Box if you become a new life master. We want to recognize you and get your picture if we can.

Stay tuned for hospitality updates. We are featuring a hospitality suite much like we do in Lake Geneva in October.

I live in this area and if you need any information about beauty parlors or fast food options or gas stations, etc., feel free to inquire!

Hope to see you at the bridge tables.

Thanks again for your support.

Angie Clark, tournament chairman

No Smoking Policy:

No smoking is allowed in the convention center, lobby, washrooms, fire exits, or service areas. Smokers must go outside to puff.

Partnerships:

Singles should check in at the partnership desk 45 minutes before game time to allow those attending to arrange partnerships. **Carl Sharp** is in charge of the partnership desk and will do his best to arrange suitable liaisons. The desk will be open prior to the morning, afternoon, and evening sessions. **Partners are guaranteed for all 99er events.** If no one is at the desk, leave a note, or contact Carl in person please.

Partnership Desk and Daily Bulletin:

Check the Partnership Desk for hand records, tournament schedules, area info, and your copy of the **Daily Firecracker.** A bulletin box on the desk is available for you to submit any interesting hands, amusing bridge-related stories, or puzzles for publication in the daily bulletins. If you become a new life master while at the tournament, please drop a note in the bulletin box. Include the event so we know how you went over the top.

Also check your *Daily Firecracker* for specific hospitality information for the weekend.

Recorder Slips, should you need them, are available from the directors.

Score Corrections:

For pair events, the score correction period expires at the start of the next session. For the last session of an event, the correction period expires after twenty-four hours or thirty minutes after the end of the tournament, whichever is earlier. See the director as soon as possible if you discover an error in your score. The appeal period for a director's ruling expires thirty minutes after the completion of the session.

Tournament Chairman: Angie Clark Partnerships: Carl Sharp Newcomers: Mike Cochran Daily **Firecracker** Editor: Suzi Subeck

Puzzle Page ...

Sara had Quadruplets – four kids born at the same time. They were all in second grade now and all in different classes. Tomorrow was Show & Tell at school so there was a flurry of activity this afternoon while they tore their rooms apart, deciding what to bring in to share with their class. After a few heated arguments when two siblings wanted to bring in the same thing, all decisions were made and the household was back to more or less peaceful coexistence by suppertime.

Determine the name of each quadruplet, what each brought in for Show & Tell the next day, the name of each one's teacher, and at what time each class had Show & Tell (it was different for each class, the times were 10am, 11am, 1pm, and 2pm).

- 1. The vacation pictures weren't shown by Kelly.
- 2. Show & Tell in Mr. Eastman's class was three hours after the event in Kelly's class.
- 3. Sherry shared her Show & Tell an hour after Mrs. Harmony's class.
- 4. The quilt was shown in Mrs. Spade's class but not in the morning.
- 5. Peter's Show & Tell was the toolbox that he made with his Dad.
- 6. The four siblings, in no particular order, were Holly, the one in Mr. Knight's class, the one who showed her ferret, and the one whose class had Show & Tell at 1pm.

pass pass

Let's go back in time today to a lovely summer setting in Rapallo, Italy, 1957. At the swim club, Al Roth and Tobias Stone are enjoying a relaxing afternoon in a friendly rubber bridge match against two of their hosts.

Every opening bid in the Roth-Stone system was at least two highcard points heavier than today's openings. But the flip side of the system was that responder could be more aggressive than today's responders. Players today would open the North hand 2NT. Stone, however, opened 1 and it was Roth, sitting South, who became the aggressor.

After Stone's 2NT rebid, Roth showed his club support and Stone showed his diamond support (those anemic spades were never mentioned). It was Roth who bid the spades with his A-K-9. Stone had great cards for slam and when he cuebid 4♥, Roth bid the slam. Roth said afterwards, "The final bid was somewhat of a gamble. Hands of this nature are very difficult to bid, and you will sometimes find yourself in a bad slam."

To make 12 tricks, Roth had to time the hand carefully. He won the heart lead, discarding a spade, cashed a high trump, led two rounds of spades and then another trump to dummy. When the diamond queen did not fall, Roth ruffed a spade, establishing the thirteenth spade in dummy. He now had three discards for three club losers. If he had drawn two rounds of trumps before cashing his ace-king of spades, he would have been set. After the hand, Roth played some tennis and took a swim in the pool, thinking about whether there was any lead that could defeat 6.

Today's hand from an OKbridge game last month illustrates two nice themes, which I'd like to share with you. The first is called, "Do it yourself." Instead of relying on a defensive signal, asking partner to make the key play, do it yourself if you can.

I was South in 4 doubled and West led the king of hearts. East signaled with the 2, asking for a club switch. West, however, did not like the idea of leading his 9 of clubs into dummy's 10-8, and chose instead to lead another heart. I ruffed, drew trumps and, with the help of the diamond finesse, made the doubled game. East blamed West for not obeying his signal, but East should have applied the principle, "Do it yourself," by overtaking the heart at trick one and cashing his clubs. His partner would have ruffed the third round for a one-trick set.

The other theme concerns my "weak" jump overcall. The theory goes like this: Instead of overcalling at the one level in a six-card suit, try to make a jump overcall. You should have less than 13 points, and you also must keep an eye on the vulnerability. The jump overcall is a powerful weapon; since it describes six trumps, partner can raise directly to the limit, as my partner did with his four trumps.

What does it take to be a champion bridge player? This question has many answers. I know great doctors who can't function at the bridge table. On the other hand, there are some experts who can't do anything well but play bridge. There are many approaches to the game that can lead to success. Today, look at C. S. Shen's actions as East.

South's Stayman bid followed by 3♣ was forcing. North's 2♠ double followed by 3 was natural, showing 4-4 in the majors. Shen's final double was asking, in his partnership, for the first suit bid by dummy, hearts.

Shen figured this way. "My partner overcalled 24, was doubled, and then brazenly bid 3 anyway. He must have 11 cards in the two suits. North has 4-4 in the majors and probably 3 clubs in support to raise to slam. If my partner is 1-1 in hearts and clubs, I want him to lead a heart. If partner is void in clubs, South has nine of them. But from a statistical point of view, an eight-card suit is 13 times more likely than a nine-card suit. The danger is that partner has a void in hearts and two clubs. But a seven-card suit is less than eight times more likely than an eight-card suit. The opponents, however, don't know if my partner has a heart to lead. So maybe my double will scare them into 6NT and I'll be on lead. I'll lead a diamond, hoping partner has the king. If my partner is void in hearts, and they make 6 doubled, I've only cost 170 points. And it's highly unlikely anyone can redouble, since South never clearly indicated a slam-going hand."

Shen doubled, everyone passed, and West led a heart for down one. Away from the table Shen is an astro-physicist.

Let's go back in time to the 1930's in New Zealand. Bob Williams was South in a 6♠ contract. Can you see how he took 12 tricks after the king-of-clubs lead?

This hand is from Cathy Chua's interesting book, The History of Australian Bridge. Declarer won the ace of clubs at trick one and cashed the ace-king of diamonds. Then he ruffed a diamond with the ace of spades, East discarding a heart. He returned to hand with the ace of hearts and led a fourth diamond, discarding the other heart from dummy. East pitched a second heart as well, but to no avail.

West returned a high club, ruffed by South. Now a heart was ruffed in dummy and a trump led. The trumps were drawn and the fifth diamond was the twelfth trick. Notice that if East held one less heart, he would have defeated the slam, because after discarding two hearts and following to the ace, he'd be able to overruff dummy when the heart was ruffed.

> Be nice at the table... Don't make an ACE of yourself!

Once in England, because of a water spout, it rained frogs!

Almost two-thirds of the earths surface is covered by water. If the earth were flat, water would cover everything in a layer two miles deep!

During a solar eclipse, the shadows of leaves make the same crescent shape of the eclipsing sun. The image is made by light passing through tiny holes in the leaves.

Monks in the 16th century recorded seeing a giant explosion on the side of the Moon. It most likely was a large meteor that slammed into the Moon and left a large crater. It was a good thing the Moon was between us and the meteor! See the rings of Saturn while you can. They slowly wobble up and down over the years as Saturns poles point away from then towards the sun. The rings disappear when edge on to our line of sight. Currently they are almost at their widest point and can be seen even in binoculars and small telescopes.

A star has been found moving closer to the sun. In a million years a star named Gliese 710 will have moved to within 6/10ths of a light year from the sun. This is more than six times closer than today's nearest star, Alpha Centauri, which is over 4 light years away.

Stars viewed through even the largest telescopes look like tiny points of light. But astronomers, using the Hubble Space Telescope to photograph a star called Betelgeuse (pronounced "beetle jooze"), have now been able to see the surface of another star. Betelgeuse is a red, giant star located at the left shoulder of the constellation Orion and is the largest known star in our galaxy.

Not all stars are found inside galaxies. Astronomers have found stars moving between the galaxies, which are millions of light years apart. These stars may even have planets, possibly with intelligent life on them. If they do, these beings would see a lonely sky with just one star (its own sun) and a few faint galaxies.

Tired of the cold weather? Take a vacation on the hottest planet in the solar system – Venus. At over 800 degrees, it is hotter than Mercury because the clouds and abundant carbon dioxide hold in most of the heat received from the sun. Ever notice on a map how the South American and African coasts, along the Atlantic, fit together like two pieces of a giant puzzle? That is because at one time, millions of years ago, they were one continent. Magma from deep in the Earth broke through thin places between these continents and pushed them apart. They are still slowly moving apart and the Atlantic ocean is growing wider.

The lead in pencils, really graphite, is made of the exact same thing as diamonds. Both are pure carbon which just formed under different pressures and temperatures. Intense heat and pressure form the carbon atoms into crystals making diamond, while lesser heat and pressure form the carbon into sheets making graphite.

Geologists have discovered there seems to be more water miles deep between the rocks of Earths mantle than in all the oceans of the world. The intense pressure of the tons of rocks above keeps the hot water from turning to steam and escaping.

If you were to place the planet Saturn in a big enough bowl of water, it would float!

About 20 percent of the earths land is made up of desert, and the worlds largest desert is the Sahara of North Africa. Black Holes are disappearing! At first, it was believed that nothing could come out of a black hole and they would be around forever. But a famous physicist, named Stephen Hawkings, discovered that black holes lose energy and eventually evaporate away. But don't wait around for one to "disappear" because it will take trillions and trillions of years to happen.

On a clear night, the human eye can see between 2,000 and 3,000 stars in the sky.

(Continued from page 17)

Water is the only substance on earth that is lighter as a solid than a liquid.

The White Sands national park in New Mexico is the largest desert with the fine white sand, made of a mineral called gypsum.

Our sun is over 2.5 million miles around at its equator.

After a blistering day of exploring, astronauts may relax with a nice cold glass of ice water from Mercury, the planet closest to the sun. Since there is no atmosphere there to spread the heat around, shadows in deep craters at the poles could hold ice deposited by early comet collisions.

96% of Egypt is made up of the desert sands of the Sahara.

Mount Everest is the tallest mountain in the world, standing 29,028 feet high.

The Amazon rain forest supplies one-fifth of the world's oxygen!

Where do comets come from? There is a huge cloud of objects made of ice and rock encircling our solar system, called the Oort Cloud. It lies beyond Pluto and extends half way out to the next star. These objects occasionally bump into each other, sending one in towards the sun to become a comet like the recent Hale-Bopp comet.

Every day, eight trillion gallons of water pour out of the mouth of the Amazon River into the Atlantic Ocean. The ice that covers 98% of Antarctica holds 90% of the worlds fresh water.

Lake Baikal in Russia is the deepest lake in the world, and holds as much water as all the five Great Lakes of the U.S. combined!

Lake Superior, one of the five Great Lakes between the U.S. and the border of Canada, is a freshwater lake with the largest surface area, and it's so big it has waves!

Olympus Mons is a mountain on Mars, which is about fifteen miles high, three times higher than Mount Everest on earth, and at the top it is 45 miles across!

Someday you may go ice fishing on Jupiters moon, Europa. Evidence is being constantly discovered that there is an ocean under the ice of Europa. The ice would keep the ocean from evaporating and huge tides caused by Jupiter would keep the ocean temperature above freezing. What kinds of life might there be in such a strange ocean?

The deepest natural caves known to man are the Pierre St. Martin Caves in the Pyrenees Mountains between Spain and France, which reach 4,370 feet deep, almost three times as deep as the Empire State Building is high!

When you think you're standing still remember this fact. Even though you don't feel it, our entire local group of galaxies is moving at about one million miles per hour toward another galaxy group called the Virgo Cluster.

Scientist believe that diamond rains occur on Neptune and Uranus. The heart of these planets may be a layer of diamonds hundreds of miles thick.

Jupiter's giant red spot is like a tornado and it is 3 times bigger than the earth.

The largest crater on the moon measures 183 miles across.

Astronomers know Mars is a backwards planet. Once a year, for several days, it appears to move backwards in its orbit.

(Continued on page 19)

(Continued from page 18)

This is actually an optical illusion when the faster orbit of Earth races past Mars.

The farthest you can see with the naked eye is 2.4 million light years away! (140,000,000,000,000,000,000 miles.)

That's the distance to the giant Andromeda Galaxy. You can see it easily as a dim, large gray "cloud" almost directly overhead in a clear night sky.

Australia is the only continent on earth without an active volcano.

The earth is over 330,000 times smaller than the sun.

The Earth is 4.5 billion years old.

71% of the Earths surface is covered with water.

Jupiter is a planet made entirely of gases.

There are over six billion people living on Earth!

The Earth is 93 million miles away from the sun.

97% of the earth's water is undrinkable!

If you could live on the planet Mercury, a year would only last 88 days.

The Hindus of India once believed that the Earth was a huge bowl (to keep the oceans from falling off) held up by giant elephants standing on long pillars. No one back then ever thought to ask what the pillars were standing on! If someone tells you you smell like flowers, it may not be a compliment if they are refering to the rafflesia flower. This flower smells like rotten meat!

It is said that when England is in danger a drum owned by Francis Drake rolls by itself.

The language of a society changes slowly but steadily with the result that an educated person will not be able to read or understand words in his language written 500 years ago.

There is no word that rhymes with orange.

It took 55 years before the telephone, invented in 1820, was put to use in society.

Sound travels over 14 times faster through steel than through air. If you need to signal someone quickly standing on a metal bridge, bang on a steel pipe!

The Great Pyramid of Cheops in Egypt, built about 2600 BC, was constructed with enough stone to make a brick wall that could go around the world 20 inches high.

In comparison, the largest modern building, the Pentagon, in Washington DC would only make a brick wall that went around the world two inches high.

If everyone in the world took a daily bath, our entire supply of fresh water would be get dirty in a single day. The number of bacteria in a quart of soil from your backyard garden is 30 times greater than the population of the world.

(Continued from page 19)

When high speed trains past each other they must slow down or they will break their windows. The passing trains produce a low-pressure area between them that can actually pull the glass out of the frames.

A hydroplane can go much faster than a normal boat because it lifts the hull out of the water. It uses supports that act like underwater wings to give it lift. It is really just flying through water.

You can surf on only one or two inches of water. Jump on a wooden disc and you can ride 20 feet or more in the shallow water along the beach.

Manhole covers, the lids that cover sewers, are always round. Why? The round cover rests on a lip that is smaller than the cover so it can't drop through the opening. A square or rectangular cover, no matter how it was made, could fall through.

The fear of spiders is called arachnophobia. Some other phobias are hydrophobia (fear of water), triskaidekaphobia (fear of the number 13), ecclesiaphobia (fear of churches), pogonophobia (fear of beards), ergophobia (fear of work). Donald Duck, the cartoon character NEVER wore pants. But, whenever he got out of a shower he would always put a towel around his waist.

There was only one code during World War II that was never broken by the enemy and was used by the US Army. Navajo soldiers, called Codetalkers, developed a radio code based on their native language. It was the only way US soldiers on the battlefield could be sure that messages were from there own side and not from Japanese imitators. Vincent Van Gogh only sold 1 painting his whole life and that was to his brother!

A Japanese explorer named Maomi Uemura was the first man to reach the North Pole alone, on April 29, 1978, after his eight-week journey.

In transistors, electrons perform an amazing magic act called quantum tunneling. They can move from one side of a thin metal plate to the other without going through the plate.

Steamboat Geyser, located in Yellowstone National Park, is the most powerful geyser in the world, and can shoot super -hot water 300 feet in the air.

When hydrogen is cooled to almost absolute zero (-460°F or -273°C), the lowest temperature possible, it becomes a liquid with surprising properties. It can flow against gravity and will start running up and over the lip of a glass container.

Mark Twain, one of America's best-loved authors, dropped out of school when he was 12 years old, after his father died.

The ice cream cone was originally a way to hold flowers, not ice cream!

The first modern traffic light was put to use in Cleveland, Ohio, in 1914.

On April 2, 1872, Victoria Woodhull became the first woman candidate for the U.S. presidency.

Every year, plants make and store ten times the amount of energy that people use.

Babe Ruth kept a cabbage leaf under his cap to keep cool.

Over 160 billion pieces of mail are sent every year in the U.S.

Tomatoes are really fruits, not vegetables.

If someone tells you you smell like flowers, it may not be a compliment if they are refering to the rafflesia flower. This flower smells like rotten meat!

Glass is made of sand.

America's first major highway was called the National Road, and was opened in 1814, connecting the city of Baltimore with the Ohio River. Abraham Lincoln once invented a device for lifting riverboats over shallow water.

It took 55 years before the telephone, invented in 1820, was put to use in society.

You speak about 4,800 words a day.

Did you know that the Empire State Building once got stuck by lightning 9 times in 20 minutes.

Did you know that the Egyptians thought the world was in the shape of a rectangle and that the heavans were held up by four giant pillars? They also warned sailors not to go to far away or you just might row off the giant rectangle called Earth. Well When the Queen of England heard this she sent 4 ships south, north, east and west to search for these "pillars". When they didn't find any (because the world is in the shape of a sphere) they questioned the Eygptians and they told her the pillars must have been farther than they predicted! Clever weren't they?!

Did you know that there is a world record for seeing how many times you can attempt a world record?!!

It would take approximately 31.7 years to count off 1 billion seconds.

Honey is the only food that won't spoil.

There's 293 different ways to make change for just 1 dollar.

A Jiffy is an actual unit of time. 1 Jiffy = 1/100 of a second.

A Rubik's Cube can make 43,252,003,274,489,856,000 different combinations!

In the tropical rainforest it gets about 80 to 400 inches of rain yearly. If it is raining really hard, it gets about 2 inches of rain per hour.

There are 293 ways to make change for a dollar!

One kind of insect called a spittlebug, lays its eggs in a big nest of saliva bubbles. I guess no predator would look for a meal in there!

The holiday Boxing day was originally celebrated in England ,for the servants to the rich people. After Christmas, the servants "boxed up" all the left-overs from the rich people and bring them home.

Over 10,000 birds a year die from smashing into windows!

A baby is born approximately every 11 seconds in the United States!

Glass is actually a liquid- if you had a glass window, over hundreds of years it would seem like it had melted a little bit!

The letter Z is only used in words more than five letters when two vowels are present.

Water expands 9% when it is frozen!

A normal piece of paper cannot be folded more than 7 times.

The only food that doesn't spoil is honey.

In China, they believe that the longer ones earlobes are, the wealthier they will be.

It is impossible to sneeze with your eyes open.

The average person will spend 4 years of their life on the toilet! Better stock up on TP!

Thomas Edison, the inventor of the lightbulb, was actually afraid of the dark.

4th of July Jokes

The difference between a duck and George Washington is: One has a bill on his face; the other has his face on a bill!

What kind of tea did the American colonists thirst for? Liberty!

What was the craziest battle of the Revolutionary War? The Battle of Bonkers Hill.

Why were the first Pennsylvania settlers like ants? Because they lived in colonies.

What's red, white, blue, and almost as ugly as a dog? A revolutionary warthog!

Why did Paul Revere ride his horse from Boston to Lexington? Because the horse was too heavy to carry!

Jay and Sara Whipple will be bringing us FAST RESULTS as they have at the past several District 13 Regionals. In addition, what makes us special is that we post the results on the CCBA website as a compliment to Jay's production. Those who are not at the tournament can go to: http://www.bridgeinchicago.com/ to see who is winning what! Tom Dressing, CCBA Webmaster, mans the CCBA site and between the two manners of operation we cover all bases!!

Happy playing!
